# Young Hoo (Ryan) Jun

San Jose, CA (Open to Relocation) | (919) 949-8860 | youngofficial0616@gmail.com | linkedin.com/in/young-hoo-jun

## EDUCATION

**University of Pennsylvania** | M.S.E. in Computer and Information Science — Dec 2025

**Duke University** | B.S. in Computer Science and Statistics (High Distinction), AI & ML Concentration — Dec 2023

## EXPERIENCE

**Netflix** — Los Gatos, CA

*Software Engineer – Network Engineering & Reliability* — May 2025 – Aug 2025; Feb 2026 – Present

Converted to full-time after internship

- Modernized a legacy network-testing platform by building a unified Python API to launch, monitor, and cancel lab tests and retrieve results; initiated migration to Java/Spring Boot and GraphQL for downstream integration
- Replaced SSH-based CLI scripts with a Python orchestrator automating network lab setup and test execution via REST and gNMI APIs for robotic fiber patching, device configuration, and synthetic traffic generation
- Owned config templating for a new production router platform: designed a hierarchical Python/Mako template architecture, built its base layer, and led a team of 8 network engineers in developing the remaining templates
- Designed fault-tolerant test execution for shared lab hardware, specifying resource locking, idempotent retries with state reconciliation, and immutable config snapshots in PostgreSQL to enable concurrent, repeatable runs
- Built MCP tools that let engineers query lab device data via a Slack LLM agent, replacing manual SSH lookups

**Freelance Full-Stack Software Developer** — Oct 2022 – Jun 2025

- Designed, built, and ran a patient-facing website and reservation system used by a dental clinic for nearly three years, from UI through Java/Spring Boot backend and MySQL schema on AWS RDS
- Automated zero-downtime CI/CD deployments to AWS EC2 with Travis CI, CodeDeploy, and NGINX

**Duke University** — Durham, NC

*Research Assistant at Laber Labs (Reinforcement Learning & Precision Medicine)* — Aug 2023 – Dec 2023

- Modeled cognitive function on a novel continuous-glucose dataset, applying functional regression to the full curves rather than summary statistics; awarded High Distinction in Statistics for the research

*Teaching Assistant for CS307 Software Design [Java], ECE356 Network Architecture [C/C++]* — Aug 2022 – May 2023

- Mentored CS307 teams through 6 projects, coaching OOP, design patterns, API design, testing, and code review
- Guided ECE356 C/C++ projects (echo server, software router, RIP) and held office hours on TCP/IP and routing

**Shineflow Seattle Inc.** — Remote

*Data Science Intern* — Jan 2022 – Aug 2022

- Developed data pipelines and a Python review scraper to power client-facing dashboards, consolidating Amazon, Shopify, Meta, and Google Analytics data in BigQuery using SQL
- Launched an A/B-tested product recommendation quiz and email funnel with marketing and design; 12% revenue lift

**Republic of Korea Army (DMZ Security Control Unit)** | English Interpreter — Oct 2018 – Jun 2020

- Interpreter/liaison for foreign dignitaries visiting the DMZ, including heads of state, ambassadors, and legislators

## TECHNICAL SKILLS

- **Languages**: Java, Python, C++, C, SQL
- **Backend:** Spring Boot, Spring Data JPA, GraphQL, REST API, JUnit, pytest, Maven, Gradle, Flask, MCP
- **Network:** gNMI, SNMP, BGP, IS-IS, MPLS, Mako
- **Data:** PostgreSQL, MySQL, MongoDB, BigQuery
- **Web:** JavaScript, React, HTML, CSS
- **DevOps:** AWS (EC2, S3, RDS, CodeDeploy), GCP, Docker, Linux, NGINX, Jenkins, Travis CI, Git
